OVERVIEW

Robertson Noreus is a staff lawyer in the firm's e-Discovery Analysis and Technology practice group. His practice encompasses complex commercial and business litigation, arbitration, and government and internal investigations. He manages and oversees all aspects of the discovery process, including strategic counseling, document collection, search and culling, review, and production of client materials in response to subpoenas and requests for production from opposing parties and government agencies.

Robertson develops and implements strategies for large-scale document reviews, employing advanced analytics and artificial intelligence within Relativity Review Center to enhance efficiency, accuracy, and cost-effectiveness. His experience includes the integration of aiR for Review and other AI-assisted review tools to expedite issue identification, improve quality control, and optimize review workflows.

He is a Certified Associate in Project Management (CAPM) through the Project Management Institute and has completed Relativity Administrator training along with attaining Relativity Review Pro certification.

EDUCATION

- B.A., University of Washington
- J.D., Seattle University School of Law, *(cum laude)*

ADMISSIONS

- Bar of Washington

THOUGHT LEADERSHIP *POWERED BY HUB*

- September 2015, Arbitration World

AREAS OF FOCUS

- E-Discovery Analysis and Technology (e-DAT)
- Financial Institutions and Services Litigation

REPRESENTATIVE EXPERIENCE

- In response to a FTC 2nd Request, orchestrated the preservation, collection, analysis, and production of more 5.6 million emails, Teams messages, text messages, and internal files for 28 custodians. Rob led a team of more than 20 e-DAT review attorneys who leveraged relativity analytics to dramatically reduce the number of files requiring eyes on review to less than 20% of the collected volume. In all, this massive undertaking was completed in just over 3 ½ months enabling our client to certify substantial compliance with the FTC's requests on the first day it was eligible to do so.
- Managed a document collection exceeding six million records and oversaw a large-scale document review project utilizing both targeted search terms and predictive analytics. Supervised extensive client data collections from more than 100 custodians, encompassing both electronically stored information and historical hard copy documents spanning over seventy years. To date, the team has produced more than four million pages of client materials to opposing parties across approximately one hundred productions. Additionally, collaborated with co-counsel to prepare for more than fifty client and opposing-party depositions by executing complex data queries, identifying key documents for examination, and assembling comprehensive witness binders to support attorney preparation and deposition strategy.
